

KG N PILLINGER IS THE UK'S LEADING MANUFACTURER AND SERVICE SUPPLIER OF BESPOKE WATER PUMPING EQUIPMENT

In 1926 G.C. Pillinger & Co. designed and patented the first automatic water pumping plant, known as the 'Bruston Pumping System'. Originally founded in 1967, K.G. Norman Electrical and Mechanical Engineers, acquired the pumping division of Pillinger & Co. in 2003 to form KGN Pillinger.

Nearly 50 years on, KGN continues to grow and operate from 30,000 sq. ft. modern premises in Croydon, Surrey. Their work ethic and attention to detail remains at the core of the company and with a progressive investment policy in the latest technologies and machinery, they remain at the forefront of design, manufacturing and service that not only meets but exceeds expectations.

"We work in partnership with the water, industrial and building services industries throughout the world to provide complete engineering solutions and support for all our client's water pumping requirements. Our client list ranges from the MOD and major Water Utilities to global construction and development companies.

"From concept through planning and initiation, projects are managed through advanced 3D Computer Animated design. Blueprints are available for clients to view and amendments can be made throughout the process.

"3D Design combined with client interactivity has increased the efficiency of our workflow and allowed any potential issues to be identified at an early stage. The entire process is supported with Building Information Modelling (BIM) whereby all project partners use a single shared 3D model. This cultivates collaborative working relationships ensuring everyone is focused on achieving best value from project initiation to eventual commissioning."

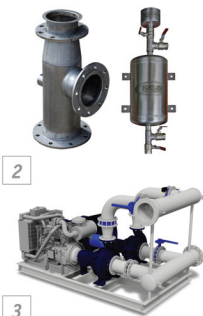

It is KGN's attention to detail and the flexibility within their manufacturing process that keeps them ahead of the competition. Their proven track record and excellent sales and service policy ensures they remain at the leading edge of the industry.

KGN products range from Cat 5 Washdown Sets and Pressurisation Units to fully fitted WRAS approved Underground Plant Rooms (UPOD), Fire Booster Sets and extreme temperature pressure controlled Fill Spill Units. They have recently been awarded WRAS approval for their variable speed energy efficient range of AV and EV booster sets which puts them in the enviable position of being the only company in the UK to have WRAS certification for both above and below ground booster plant.

They are the only UK based booster set manufacturer to use automatic TIG welding equipment coupled with 316L stainless steel as

1

2

standard and their series of Tri-Drill machines are able to collar steel tubing and form flanges directly on the end of the pipe without the need for welding.

Recent additions to the KGN assortment of Hi-Tech tooling machinery include the latest Rotary Index Laser Cutter, Press Brake and De-burring machines enabling a seamless process for the fabrication of stainless steel components used in the manufacture of the booster sets.

"With this new equipment our customers can expect new levels of productivity and cost efficiency while we continue to deliver high quality bespoke products at competitive prices.

"Moreover, with this latest investment we intend to broaden our scope of manufacture and sales, not only within our industry but other sectors that have a potential need for precision engineered stainless steel components. This equipment incorporates the latest technology and software for fabrication of stainless sheet and tubing. It is an exciting time for the company as we feel it is a tremendous opportunity to expand into new markets."

Creating brand awareness is essential to the KGN core business model. Over the years they have had an active sponsorship program within the MCE British Superbike Racing Championship. In 2011 they saw their sponsored team Swan Yamaha win the championship title and are currently providing sponsorship to the 2015 Be Wiser Kawasaki Superbike and Sidecar Racing Teams. They are also an Official Sponsor of the Race Series itself and support the 'KGN Pillinger Team Trophy' to run alongside the rider's championship, recognising team performance and engineering excellence.

"Our expanded portfolio into motorsport sponsorship matches our continued investment in engineering technology and stainless steel fabrication services.

"Working with Milwaukee, FFX, Be Wiser, Yamaha, Kawasaki and BSB provides excellent opportunities for us to create brand synergy with like-minded companies whose ethos fits our own. Their passion to succeed and deliver mirrors our profile exactly."

WRAS APPROVED KG N PILLINGER BOOSTER SETS

KG N Pillinger range of AV and EV Water Booster Sets have recently been awarded the WRAS seal of approval

One of the key obstacles presented to consultants and contractors when specifying potable water booster sets can often be the Water Company's requirement for WRAS certification to ensure suitable equipment is installed.

As part of their continuing growth KGN Pillinger now hold full WRAS approval for their variable speed energy efficient AV and EV range of booster sets. This certification is in addition to the full WRAS approval KGN hold for their UPOD Underground Plant Room and means KGN Pillinger is now the only company in the UK to have WRAS certification for both above and below ground booster plant.

For further information regarding these or any of the KGN Pillinger range of products and stainless steel fabrication services please contact sales@kgnpillinger.com or telephone 0208 681 0097
